Step 3: Priority Audience

Demographics

- The demographic primarily consist of traditionally aged undergraduate students from 18 to 20 to years old. The number may be higher if transfer students are included in the segment. Of degree seeking undergraduate students in the College of Health an Human Performance during Fall 2025, 58.14% of students were female with the remaining 41.86% being male. Here is a breakdown of the racial/ethnic demographics (University of Florida, 2026a).

Enrollment By Demographics, and Student Level: Fall 2025 College: Health and Human Performance		
Race/Ethnicity	Undergraduate (degree-seeking)	
	Female	Male
Asian (A)	8.08%	8.16%
Black or African American (B)	6.94%	5.10%
Hispanic/Latino (H)	24.24%	22.90%
Nonresident (O)	0.98%	3.29%
Race and Ethnicity Unknown (X)	1.31%	1.25%
Two or More Races (M)	4.73%	4.88%
White (W)	53.71%	54.42%
Grand Total	100.00%	100.00%

Geographics

- Data on HEB undergraduate students is unavailable on the public facing UF website - so geographic information can at best be extrapolated from the general student body. Geographically, of undergraduate students in 2025, 36,194 were from the state of Florida, with the remaining 6,642 coming from other states. Of the 42,836 total undergraduate students, 24,669 come from just 10 densely populated counties in Florida with the remaining students coming from 52 counties (University of Florida, 2026b).

Intended Direction

- While not undergraduates, the graduate HEB program has students that work across many fields including academia, health and human services, medicine, hospitality,

etc. Extrapolating this to undergraduate preferences given the similarities of the programs, we can generalize that HEB undergraduate students are interested in working with people across many health related domains.

Values and Lifestyle

- Values and lifestyle are likely to be varied amongst a traditionally aged undergraduate population. Some general assumptions for a HEB undergraduate are a curiosity and priority of health, a desire for helping others, and are likely developing and building structure and routines given their age and undergraduate status.

Social Networks

- Social networks are similarly going to be varied across HEB undergraduates. Likely, they share their home with roommates and are branching out into different social groups as they take new classes and learn new things.

Community Assets

- Examples of community assets provided by the program include 1) a fully fleshed out department with degrees ranging from bachelors to a doctoral program, 2) a robust range of expertise from numerous faculty in the field of health education and behavior, and 3) frequent advertisement of internship and employment opportunities.

Step 5: Priority Audience Barriers, Benefits, Motivators, the Competition, and Influential Others

Perceived Barriers and Costs

- An example of a barrier is in the name of the program itself - the untraditional name is not something that may not resonate with students in comparison to Nursing, Biology, or Public Health. Other barriers include requirements like the 12 credit hour internship requirement for the Community Health Promotion track which is a substantial commitment (University of Florida, n.d.).

Desired Benefits

- Generally, the desired benefits of HEB undergraduates mimic undergraduates with a desire to increase knowledge in their specific field and to increase the likelihood of gainful employment for purpose and financial stability.

Potential Motivating Strategies

- Strategies to motivate students to become a HEB major could include focusing on the human nature of the program. Likely, a persuasive statement would focus on how HEB gears students towards careers that help people. Another focus could focus on the combination B.S. and M.S. that is offered - allowing a unique opportunity to efficiently obtain graduate education.

Competing Behaviors, Forces, and Choices

- Competing behaviors, forces, and choices include the inclination to not commit, given the permanence of the choice, students may desire keeping their options open. Similarly, students may chose a program with a perceived comparative ease to lessen the workload. Also, rival options that are more established may also compete for students choice given the safety associated with them.

Influential Others

- Examples of influential others are health science communicators on popular social media sites, guidance counselors at the university, and family or friends.

Instagram Posts

Figure 1. The image was generated using ChatGPT with the prompt: "Generate an image of a University of Florida student in the Health Education and Behavior program completing an internship. Show them feeling proud of the work they are doing. Add text that says: "This is what a career in Health Education and Behavior looks like."

Caption: Do you have a passion for helping others? HEB gives you the tools and the opportunities to chase your purpose.

Figure 2. The image was generated using ChatGPT with the prompt: Generate an image of a University of Florida student in the Health Education and Behavior program signing up for the combination HEB BS and MS.

Caption: Want to work towards a masters while pursuing your undergraduate degree? The HEB program provides a combination B.S. and M.S. to advance your career even faster!
