Campaign Title

You Are the Gift of Life

Health Topic

Living kidney donation is one of the most direct ways healthy people can save a life with more than 90,000 people in the United States on the transplant waitlist (National Kidney Registry, 2026). While deceased donors play an important role, and are the majority of organs donated, the complexities of organ procurement and matching make it riskier and more intensive. Living donors provide, on average, provide higher quality organs and less risky surgeries given their planned nature. Kidneys are donated at no cost to the donor, removing a key perceived financial barrier (National Kidney Registry, 2026).

Purpose Statement

You Are the Gift of Life campaign aims to motivate healthy adults aged 18 to 40 to consider living kidney donation by demonstrating that it is safe, low cost, and within their control.

Focus

Behavior change potential is high, as the primary barrier, the fear of health risk, is based on misconception and is correctable. The campaign utilizes existing organizations - the National Kidney Registry (NKR) and its free online screener and local transplant programs. These are great matches because the NKR's main goal is to facilitate living kidney donations and transplant centers often have many patients on the waitlist who do not have family or friends who qualify as donors. Funding is broadly supported as hospitals, government payers, and insurers all benefit financially from transplants over prolonged dialysis. Finally, each successful donation is likely to produce a higher quality, longer lasting organ at no cost to the donor, reducing burden on the overall healthcare system (National Kidney Registry, 2026).
