

Design 5

1. **Background health topic:** Living kidney donation is one of the most direct ways healthy people can save a life with more than 90,000 people in the United States on the transplant waitlist (National Kidney Registry, 2026). While deceased donors play an important role, and are the majority of organs donated, the complexities of organ procurement and matching make it riskier and more intensive. Living donors provide, on average, provide higher quality organs and less risky surgeries given their planned nature. Kidneys are donated at no cost to the donor, removing a key perceived financial barrier (National Kidney Registry, 2026).
2. **Priority audience:** Healthy adults aged 18 to 40 across all other demographic variables. The main barrier would be perceived long-term health risk which is a fear based on misconceptions.
3. **Behavior objective:** The objective is to get the priority audience to complete the National Kidney Registry's free 5-minute screener. This is a doable, single act that is a material step towards donation.
4. **Target goal for behavior objective:** The target of the campaign is to generate 1000 completed screeners by the priority audience. Tracking will occur through the QR code.
5. **Marketing strategy for the behavior objective:** The strategy is to push the campaign as aggressively as we can through social media avenues like Instagram and TikTok which will contain a QR code to the screener. Given the low cost of posting, volume will be the crux of the strategy.
6. **Knowledge objective:** We want the priority audience to walk away with the understanding that kidney donations is completed at no cost to the donor. Recipient's insurance covers the cost of the donor surgery and testing entirely and donor travel costs and lost wages are covered by the National Kidney Registry (National Kidney Foundation, 2026).

7. **Target goal for knowledge objective:** To improve the percentage of the priority audience who knows donors do not have cost burden to 60%. An exact baseline will need to be calculated.
8. **Marketing strategies for the knowledge objective:** An infographic that breaks down what the National Kidney Registry will cover. This will be posted on all social media platforms daily - and if the budget allows targeted ads will be ran.
9. **Belief objective:** We want the priority audience to know that donating a kidney is not only cost-free, but it is highly safe and exceptionally effective. A healthy person can donate, recover in just a few days, and live a healthy life with one kidney. This is the campaign's main barrier as surgical risks are as low as .03% and less than 1% of donors ever develop kidney disease (National Kidney Foundation, 2026).
10. **Target goal for belief objective:** To improve the share of the priority audience who knows donors have very low risk. An exact baseline will need to be calculated, but the goal is to improve the rate to 70%.
11. **Marketing strategies for the belief objective:** To generate social media posts with testimonials from healthy young donors showcasing their uninhibited lives and describing how safe they felt during the process.

12. **Marketing strategy:**

GIVE LIFE

LIVING KIDNEY DONOR PROGRAM

Myth vs. Fact

What stops people from donating a kidney isn't the facts.

MYTH: "Donating is too dangerous."

FACT: Kidney donation is one of the safest major surgeries — about a 0.03% risk. Most donors are back to work in ~2 weeks and live full, normal lives.

MYTH: "It will cost me money."

FACT: Donors pay \$0. The recipient's insurance covers surgery, and Donor Shield reimburses up to \$30,000 in lost wages, travel, and dependent-care costs.

MYTH: "I can't live with one kidney."

FACT: Fewer than 1% of donors ever develop kidney failure, and long-term survival matches comparable healthy non-donors.
