

Design 7: Position Focus Design

Part 1

Positioning Statement: We want to see healthy adults aged 18 to 14 complete the National Kidney Registry screener as a safe, cost free, and meaningful step forward towards donation. A selfless, but harmless, way to directly be the hero of another persons life.

What category?: Health

What is the focus: Benefits focused

What is the value proposition?: A life saving act at no cost and minimal risk to the donor.

Part 2

Background: Living kidney donation is one of the most direct ways healthy people can save a life, with more than 90,000 people currently on the transplant waitlist in the United States (National Kidney Registry, 2026). Living donors provide higher quality organs on average, and the planned nature of the surgery makes it lower risk than deceased donation. All costs to the donor are fully covered (National Kidney Registry, 2026).

Priority Audience: Healthy adults aged 18 to 40 across all conceivable demographics. On average, this is someone who is values driven and responds to calls to action. Also, this is focus on persons in the United States.

Benefits

- 1) Donating is a direct generator of profound personal meaning.
- 2) There is no cost to being a donor as recipient insurance will cover surgery and testing while NKR will cover travel and lost wages.
- 3) Donors live full and healthy lives with one kidney with less than 1% ever developing kidney disease post donation (National Kidney Registry, 2026).

Barriers

- 1) Fear of long term health consequences.
- 2) Most people simply do not know how the process works or whether they would qualify.
- 3) Many assume there is a significant financial cost to donating.

Motivations

- 1) Concrete safety data shows that surgical risks as low as .03% and less than 1% of donors ever develop kidney disease (National Kidney Foundation, 2026).
- 2) Testimonials from donors describing their simple and quick recovery process along a strong feeling of fulfillment.
- 3) The NKR's free 5-minute screener gives people a no-commitment way to find out if they qualify before deciding anything.

Competition

- 1) The chief competing behavior towards donation is simply inaction. Most people default to the assumption that the deceased donation system is robust enough and that it can fulfill recipients needs.
- 2) A fear of surgical risks.
- 3) The perception generally that this could be a major life sacrifice or setback whether it be financially, physically, or otherwise.

Influential others

- 1) Past living donors with lived experience in donation.
- 2) Primary care physician who can reassure potential donors of the safety of donating.
- 3) Transplant recipients who can share how living donation changed their lives.

Brand Name: You Are the Gift of Life

Memorable phrase: They only need one while you've got a spare to share.
