

DESIGN 9: Place & Promotion Application

Health Topic

Living kidney donation is one of the most direct ways healthy people can save a life, with more than 90,000 people currently on the transplant waitlist in the United States (National Kidney Registry, 2026). Living donors provide higher quality organs on average, and the planned nature of the surgery makes it lower risk than deceased donation. All costs to the donor are fully covered (National Kidney Registry, 2026). Healthy adults in the United States aged 18 to 40 across all conceivable demographics. On average, this is someone who is values driven and responds to calls to action.

Target Population

Our target population is healthy adults aged 18 to 40. Our ideal audience will respond well to call to action and is healthy enough to qualify as a low risk donor.

Place

The primary place of encouragement is social media with sites like TikTok and Instagram being priorities for engagement. Because the 5-minute screener from the NKF is housed online, the desired behavior can be completed anywhere, at anytime, in any location, making it a flexible good. Campaign materials can also be distributed digitally, continuing to offer easily accessible digital engagement. For those healthy adults who move beyond the screener, transplant centers will provide the medical workups that are completed at no cost for donors as donor costs are covered by potential recipients.

Promotion

The core messages that drive the campaign are that donating costs nothing to the donor, it is an exceptionally safe surgery with risks as low as .03%, that NKR can cover travel and lost wages (National Kidney Foundation, 2026), and finally, that the very first step only 5 minutes. The most credible messengers are those who have donated previously and are living normal, healthy lives. Others messengers are the NKR itself which functions as an institution with credibility and primary care physicians that are medical professionals biased to the audience who can help steward them. The creative strategy is to lean into the "They only need one. You've got a spare to share." tagline. Visuals featuring young, healthy, normal donors in everyday settings to emphasize that donors go back to a regular life afterwards, just one filled with more fulfillment. Primarily, the goal is to leverage social media that is heavily utilized by the audience like TikTok and Instagram. Short form video content, bite-sized infographics, and a QR code to the screener will be frequently found in the communication channels.
